

Detail Tables Documentation

Purpose Detail Tables describe results for every response option for every question. There is one Detail Table for every question.

Example

 *Non-Hispanic.
 N = Number of students who selected this response option.
 - = Fewer than 100 students in this subgroup.

Content

Each Detail Table has three pages. The first page describes results for the total sample, the second page describes results for male students, and the third page describes results for female students.

At the top of every page is the question number (ex. Q8) followed by the question. Each page contains the following columns:

Column	Content
Total	The first row for each response option contains the weighted percentage (unless your data are unweighted). The second row contains the number of students (N) in the subgroup that selected that response option.
Age	For each age group, the first row for each response option contains the weighted percentage (unless your data are unweighted). The second row contains the number of students (N) in the subgroup that selected that response option.
Grade	For each grade, the first row for each response option contains the weighted percentage (unless your data are unweighted). The second row contains the number of students (N) in the subgroup that selected that response option.
Race/Ethnicity	For each race/ethnicity, the first row for each response option contains the weighted percentage (unless your data are unweighted). The second row contains the number of students (N) in the subgroup that selected that response option.

Note: If the number of students in a subgroup is less than 100, the results for the subgroup are not presented.
